

Nyloplast® | Tomorrow's Storm Drainage Structures Today.

Introducing the New

ADD-a-BRANCH™

Now, adding a stub to a Nyloplast Structure in the field is simple.

The Patented Add-a-Branch™ Innovation

Now you can quickly and easily add a new inlet/outlet to a Nyloplast Drain Basin, Curb Inlet Structure or Road and Highway Structure on site with only a drill and a jig saw. Or, if the location of the inlet/outlet is undetermined, you can order your Nyloplast structure without outlets and use an Add-a-Branch in the field.

See reverse side for installation instructions.

ADD-a-BRANCH™ Installation Instructions

1
Nyloplast Drain Basin ready for Add-a-Branch Installation.

2
Determine desired location of Add-a-Branch. Use the provided adhesive template to mark location.

3
Use 1/2" drill bit to drill a saw starter hole at the location marked on the template.

4
Use a jigsaw to cut between the marked lines (follow the lines carefully). Remove burrs with a file or knife.

5
Install Add-a-Branch gasket into cut-out hole starting from the bottom and working it around until the inside flange is fit properly.

6
Once the Add-a-Branch gasket is installed, lubricate inner surface with standard pipe lubricant.

7
Install Add-a-Branch adapter by inserting one edge and twisting while pressing firmly toward the center of the drain basin.

8
Check to make sure it is fully seated into the gasket and straight.

9
Add-a-Branch installation is complete and ready for pipe to be inserted.

ADD-a-BRANCH™ Includes Ring, Template and Bell Spigot Adapter
